

BACCHIRI! — Verifiable Measurement Layer

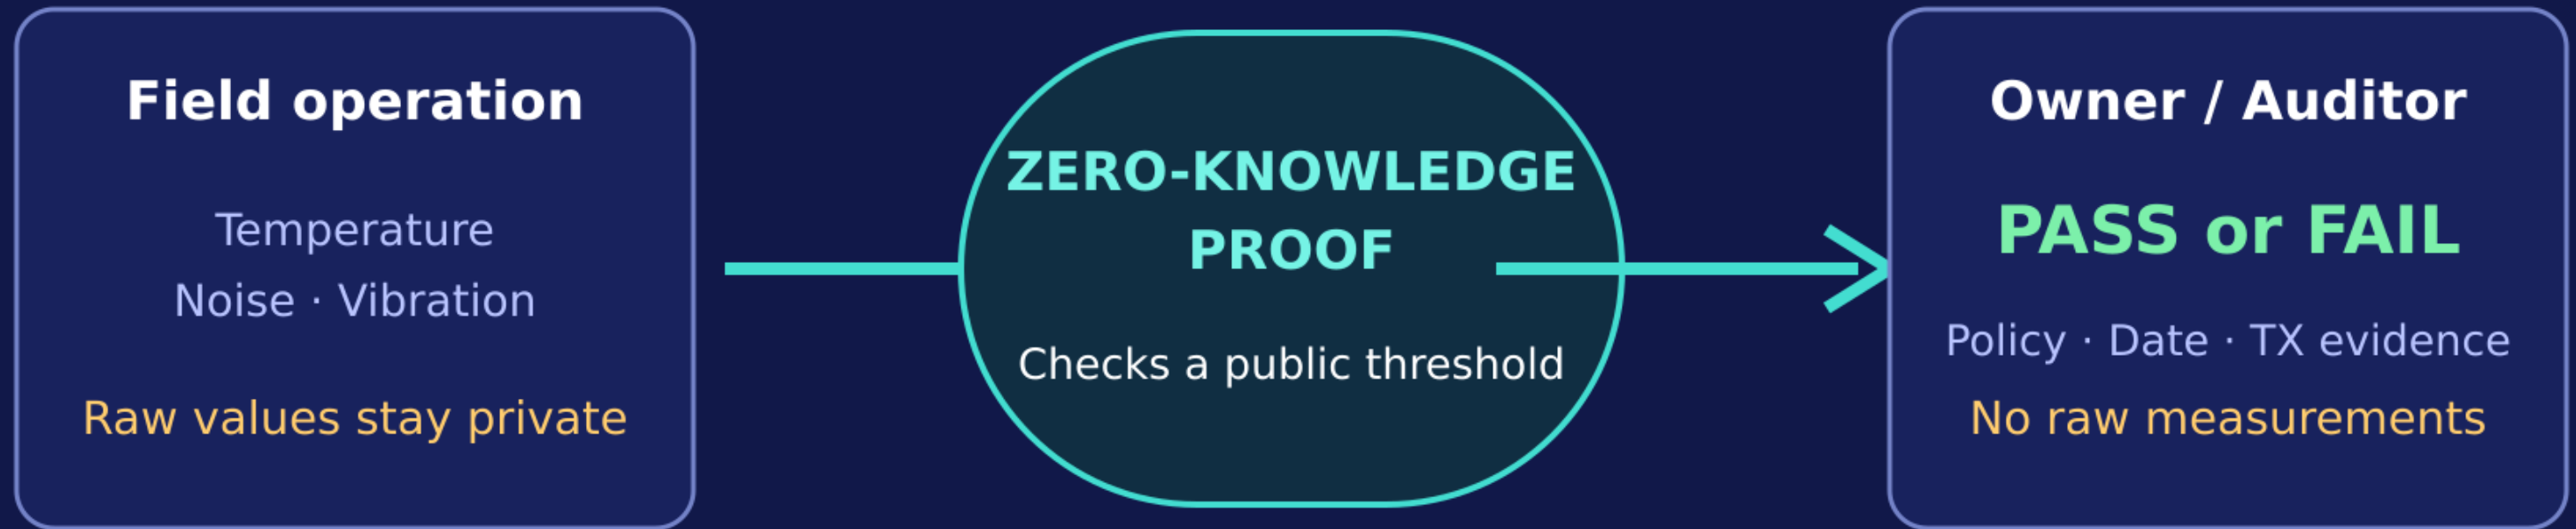

**Prove threshold compliance
without revealing sensor values**

Midnight × Cloudflare × Edge Device

English demo pitch

THE TRUST PROBLEM

Share compliance — not raw sensor data

Contractors, equipment providers, owners, and auditors can verify the same result.

One controlled path from policy to public evidence

The public threshold is fixed before private measurements become a proof.

PUBLIC BEFORE OPERATION

MINIMUM PUBLIC EVIDENCE

Bind the Device to a public threshold before measurement

Connected wallet, Device identity, registered policy, and validity period.

Location: Device Workflow

Device Workflow

Register this PC as a Device, capture a sensor value, create a ZK proof, and record the claim on Midnight.

Sensor values stay private; anyone can check the threshold result on Midnight

31/08/2026, 11:37:19

Public Result

Every submitted hourly minimum and maximum for the observed hours was within the registered public threshold policy; hours without data are reported as STOPPED.

AN HONEST CLAIM BOUNDARY

What this proof establishes — and what it does not

PROVES

- ✓ Submitted private hourly extrema
- ✓ Checked against the registered policy
- ✓ Bound to public result and TX evidence

DOES NOT PROVE

- × Physical sensor accuracy
- × Complete real-world sampling
- × Correct aggregation on the device

A precise claim is evidence that third parties can use responsibly.
